**“See Now” Urine Strips**  
**10 parameters**  
For in vitro Diagnosis Use  
Product Code: SN 13.1

#### **MATERIALS PROVIDED**

- 100 strips/bottle
- insert

#### **SPECIMEN COLLECTION AND STORAGE**

Use only clean dry container to collect urine and should be shocked before testing and test it within 2 hours. Any operations must be in the sanitary environment.

#### **TEST PROCEDURE**

1. Remove one strip from the bottle and replace the cap immediately.
2. Immerse the reagent area of the strip in the urine specimen and take it out quickly.
3. Wipe off excess urine against the rim of the specimen container.
4. Read the test results carefully within 60 seconds in a good light and with the test area held near the appropriate color chart on the bottle label. Changes in color that appear only along the edges of the test pads or after moving than 2 minutes have passed are of no diagnostic significance. Results with leukocytes test portion can be read within 120 seconds.  
If reading instrumentally, carefully follow the directions given in the appropriate instrument operating manual.

#### **INTENDED USE**

This “See Now ”Urine Strips 10 parameters are made for urine analysis of both qualitative and semi-quantitative, which are in vitro reagent for diagnostics. It tests **Bilirubin, Urobilinogen, Ketone, Glucose, Protein, Blood, Nitrite, pH, Specific Gravity, , Leukocytes**, in urine. Please refer to the out-side box and bottle label for the specific test parameters of the product you are using.

Please read this direction carefully before using.

The results on the strips can be read visually and instrumentally.

#### **REACTION PRINCIPLE**

**Bilirubin:** The direct bilirubin and dichlorobenzene diazonium [coupled react](#) to azo dyes in acid medium.

**Urobilinogen:** Urobilinogen and [diazonium salt](#) coupled react to [purplish red compounds](#)

**Ketone:** The acetoacetate and sodium nitroprusside cause reaction in alkaline medium, which produces [purplish red compounds](#).

**Glucose:** The glucose catalyzes the [gluconate](#) and peroxide hydrogen under the action of the glucose [oxidase](#). [Hydrogen peroxide](#) catalyzes new-born [O], [oxide potassium iodide](#), then the color change.

**Protein:** The protein based on a certain indicator negative charge attracts protein cationic, ionizing causes the color change.

**Blood:** [Hemoglobin](#) acts as peroxides. It can cause peroxidase release new-born [O], which causes the color change.

**Nitrite:** Nitrite and aromatic amino-sulfanilamide react to diazo compound, and the diazo compound coupled reacts with [tetrahydro-benzoquinoline-3-phenol](#), which produces azo dyes.

**pH:** Applied to acid alkali indicator method.

**Specific Gravity:** methyl vinyl ether, [maleic copolymer](#) are weak acid (-COOH) [ion exchange bodies](#), and the electrolyte ( M<sup>+</sup> X<sup>-</sup> ) in the form of salt in urine, the M<sup>+</sup> (main are Na<sup>+</sup>) reacts with ion exchange bodies, produces [hydrogen ion](#), [hydrogen ion](#) reacts with [acid-base indicator](#), then the color change.

**Leukocytes:** Prrole phenol lipid and the [neutrophil](#) esterase under the [hydrolysis](#), produces free phenol, the free phenol coupled reacts with [arenediazonium salts](#), produce purple azo dyes.

#### **Attention**

Water cannot be used as negative quality control liquid. Antiseptic of urine cannot prevent the ketone, bilirubin and urobilinogen from deteriorated. For the long time urine specimen, the test results of glucose, pH, nitrite and blood can be affected cause of bacterial growth.

#### **STORAGE AND STABILITY**

Store between 2-30°C in dry condition. Keep away from [refrigerator](#) direct sunlight. Do not touch test area of reagent strips. Isolated from damp, light and high temperature for the aim of preserving the reaction activity of reagent.

Ambient temperature: 20°C-30°C, relative humidity≤80%, the best test temperature: 23°C-27°C

#### **PRECAUTION**

Please refer to the out-side box and bottle label for the specific test parameters of the product you are using.

Please read this direction carefully before using.

The results on the strips can be read visually and instrumentally.

**LIMITATION OF PROCEDURE**

Just like all the [laboratory tests](#), the diagnosis results and treatment protocols cannot be decided only by any single diagnostic method.

**ANALYZER AND VISUAL ANALYSIS AND SENSITIVITY RANGE**

Items	Detection Range
Bilirubin (µmol/L)	17 - 70
Urobilinogen (µmol/L)	35-200
Ketone (mmol/L)	2.5 - 30
Glucose (mmol/L)	2.8 -56
Protein (g/L)	0.3 - 5
Blood (Ery/µL)	5 - 250
Nitrite (mg/d/L)	0 - 0.05
pH	pH 5.0- pH 9.0
Specific Gravity	1.000 - 1.030
Leukocytes (Leuko/µL)	25 - 500

**INGREDIENTS (based on dry weight at time of impregnation)**

Bilirubin	2,4-dichloroaniline diazonium salt buffer non-reaction ingredients	0.4%W/W 37.3%W/W 62.3%W/W
Urobilinogen	p-diethylamino benzaldehyde non-reaction ingredients	0.2%W/W 99.8%W/W
Ketone	sodium nitroprusside buffer	7.1%W/W 92.2%W/W
Glucose	glucose oxidase (microbial, 123U) peroxidase (horseradish, 203U) potassium iodide buffer non-reaction ingredients	16.3%W/W 0.6%W/W 7.0%W/W 60.7%W/W 16.7%W/W
Protein	tetrabromophenol blue buffer non-reaction ingredients	0.3%W/W 97.3%W/W 2.4%W/W
Blood	diisopropylbenzene dihydroperoxide tetramethyl-benzidine buffer non-reaction ingredients	6.8%W/W 4.0%W/W 48.0%W/W 41.2%W/W
Nitrite	p-arsanilic acid tetrahydro benzoquinoline buffer non-reaction ingredients	1.4%W/W 1.3%W/W 10.8%W/W 86.5%W/W
pH	methyl red bromthymol blue non-reaction ingredients	0.2%W/W 2.8%W/W 97.0%W/W
Specific Gravity	bromothymol blue poly (methyl vinyl ether co maleic anhydride)	2.8%W/W 97.2%W/W
Leukocytes	pyrrole amino acid ester diazonium salt buffer non-reaction ingredients	0.04%W/W 0.02%W/W 40.9%W/W 58.5%W/W

**100 strips**  
for in vitro diagnostic use

**Bilirubin**  
URO 30c

**Urobilinogen**  
KET 60c

**Ketone**  
GLU 30c

**Glucose**
